

Maintenance instructions for the Reverse Osmosis device

This maintenance instruction is provide by supplier and are approved by IKEA of Sweden.

The maintenance and tests is to ensure purified water in IKEA products there it contains pure water.

The routine for maintenance and tests is described below:

Maintenance(to change and use below items):

- Fine filter: once 3 months
- Refined quartz sand filtration: once 6 months
- Activated carbon: once 6 months
- RO (Reverse Osmosis) film: once 12 months

Every half year, Device provider will come to factory and check if device is in good condition.

It's important that the device never will dry out when not in use for production. To ensure this the device is connected with water pipeline.

Clean filter before each production start.

When production of purified water is activated, "clean" programme will start automatically and last for 2 minutes.

Pure water test:

- Test the water quality according to latest standard of GB 17324 and GB 19298.
- Perform the test frequently once per year and supplier is responsible for the costs.
