Olle Lundberg

SAFETY

It's important that your storage combination is assembled correctly; otherwise it can tip or fall down and cause injury or destruction. It's also important to remember that a combination with a height-extension post or L-foot must always be fastened into a load-bearing section of the ceiling or wall. If you're unsure – contact a professional. Different wall/ceiling materials require different types of mounting devices. Use mounting devices suitable for the wall/ceiling in your home (not included).

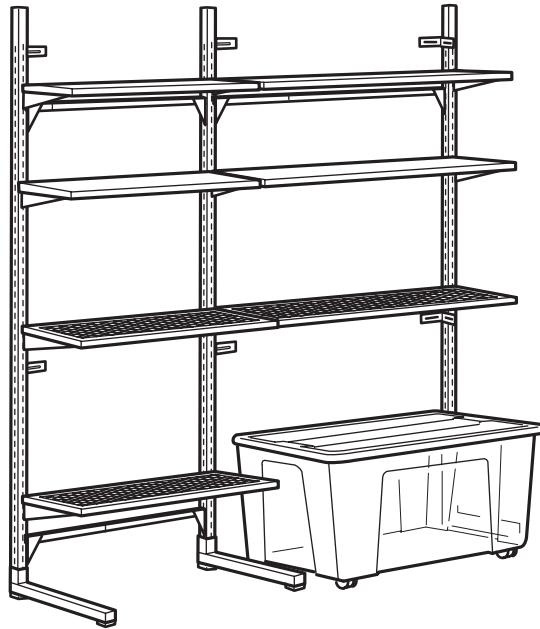

QUALITY

BRODER storage system can withstand dampness, so you can use it outdoors, with the exception of the wooden shelves. The widest and deepest shelf can hold 220 lbs, and the smallest can hold 66 lbs.

GOOD TO KNOW

Assembly requires 2 people.

Max load on BRODER shelf:
46¾x23½" galvanized – 220 lbs.
31x23½" galvanized – 154 lbs.
46¾x14¼" galvanized – 143 lbs.
31x14¼" galvanized – 88 lbs.
46¾x14¼" softwood – 88 lbs.
31x14¼" softwood – 66 lbs.

For the garage, hobby and basement

The main components in the BRODER storage system are steel posts and feet that you can combine freely to suit your needs and space. Together with shelves and brackets they become a durable shelving unit with room for everything from heavy tires and bags of cement to tools and winter clothes. And you can add on with new components and rebuild the system whenever you like. If you want to organize and protect your things, you can also complement with boxes and clothes storage solutions.

Can take dampness and heavy things

BRODER storage system can withstand a lot. For one thing, it can take dampness, so you can use it outdoors. If you have room on your balcony, terrace or in the greenhouse, feel free to put your storage solution there. The widest and deepest shelf can hold 220 lbs, and the smallest can hold 66 lbs. That means you can pack in your tires, cement bags and heavy plant pots without worry. We know, because we tested it.

For large and small spaces

BRODER storage system has what you need to organize all the things in your garage, basement and attic. Along the wall, you use the L-foot or wall uprights as the base. With the T-foot you create a freestanding solution. If you want to stretch a post between the floor and ceiling you use the height extension post. You can also secure the post to a sloping ceiling using the angled fixture. Choose the base that best suits your room and your things.

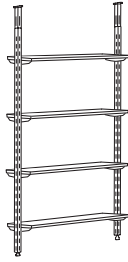

A high standard of accuracy has been sought in the preparation of this brochure.

GOOD TO KNOW

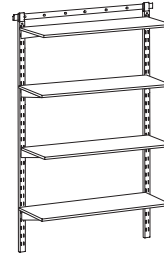

①

②

③

④

1. Room under the stairs or in the attic?

The height extension post in BRODER storage system has fittings that can be angled and screwed directly in the ceiling – even in places where the ceiling slopes. You can also combine it with posts in two different heights and build a combination where the ceiling height varies. On top of that, the height extension post has an adjustable foot that makes the combination stand steady on uneven floors as well.

2. Space in the middle of the room?

With the T-foot from BRODER storage system you can create a freestanding storage combination – wherever you want. To make your combination really stable, every T-foot comes with a brace. You should mount a brace on every second shelf section, one under the highest shelf and one under the lowest. The T-foot also has adjustable feet that make your combination stand steady, on uneven floors as well.

3. Room along the wall?

With the L-foot from BRODER storage system you can create a storage solution along the wall. A good alternative if the wall isn't strong enough to hold shelves with heavy things. To make your combination more stable, every L-foot comes with a brace. You should mount a brace on every second shelf section, one under the highest shelf and one under the lowest.

It's also important to remember that the shelves must always be shallower than the foot, and that the whole combination should be secured to the wall with the accompanying safety bracket. The L-foot comes in two depths: 16¼" and 25¼". Both have adjustable feet that make your shelf stand level, on uneven floors as well.

4. Room on the wall

With the suspension rail and wall upright in the BRODER storage system, you can transform your wall into a spacious storage place and free the floor from clutter. It's also easy to get the whole combination straight. Start by fastening the suspension rail in the wall, then hook on the wall uprights one at a time and screw them in place. Remember to use fasteners that are suitable for the material the wall is made of – and secure the rails into a load bearing wall.

Choose shelves to suit your needs

Because BRODER shelves are available in different widths and depths, you can choose according to your needs – even if your things are large and heavy. The widest and deepest shelves can hold as much as 220 lbs.

CHOOSE THE RIGHT BRACKET AND CLOTHES RAIL

	 Post + extension post	 T-foot 23 3/8"	 L-foot 16 1/8"	 L-foot 25 1/4"	 Suspension rail + wall upright

Shelf 46 ³ / ₄ x23 ¹ / ₂ ", galvanized	301.201.38	6 pcs

HOW TO BUILD

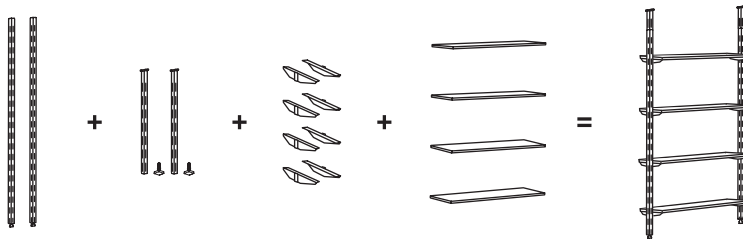

WITH HEIGHT EXTENSION POST AND T-FOOT

Plan your storage combination

Start by thinking about what you want to store and how much room you have. Once you have these answers, it's easy to choose the basic combination you need in the BRODER storage system. Do you have a space with a sloping ceiling? Then, use the height extension posts with angled fittings that

can be secured directly to the ceiling. With the T-foot you can create a freestanding storage combination – wherever you like. Complete with brackets, shelves and clothes rails. Does one of our ready combinations suit you? If not, take the one that feels best as a starting point and customize your own combination.

HEIGHT EXTENSION POSTS

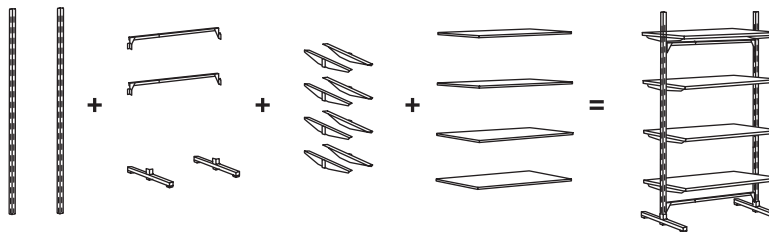

How to assemble a combination with height extension posts

Start by securing the post to the ceiling. Then hook on the brackets, put on the shelf and screw it in place. Now it's easy to measure where the next post goes and attach the remaining brackets and shelves.

How to calculate the width of your combination

Do you want to build a combination using post and height extension post? Then you have to count that every post measures 1 5/8". You must also add 1/4" to the width of the shelves you have chosen.

T-FOOT 23 1/2"

How to assemble a combination with a T-foot

Start by fastening the T-foot to the base of the two posts. Then add the brace to stabilize the combination. After that, you just hook on the brackets, put on the shelves and screw them into place.

How to calculate the width of your combination

Do you want to build a combination using an T-foot as the base? Then you have to count that every outer post measures 1 3/4" and the center post, an additional 1 5/8". You must also add 1/4" to the width of the shelves you have chosen.

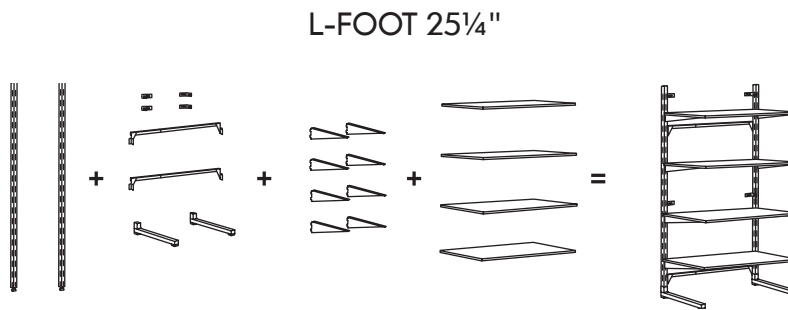

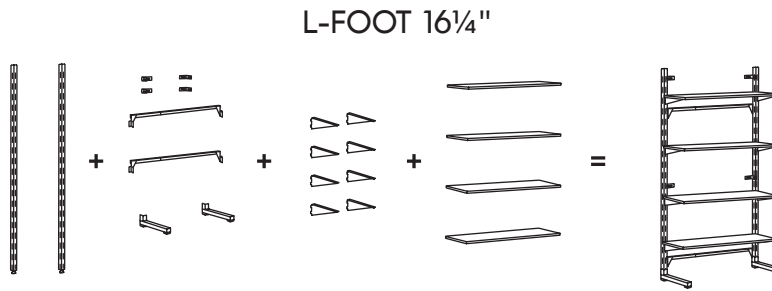

HOW TO BUILD

WITH L-FOOT AND WALL UPRIGHTS

Plan your storage combination

Start by thinking about what you want to store and how much room you have. Once you have these answers, it's easy to choose the basic combination you need in the BRODER storage system. With suspension rails and wall uprights you can transform a wall into a roomy storage space and free the floor from clutter. If you want to create a storage solution along

a wall, use the L-foot. It's also a good alternative if the wall isn't strong enough to hold shelves with heavy things. But you must be sure to secure the combination to the wall using the accompanying safety bracket. Complete with brackets and shelves. Does one of our ready combinations suit you? If not, take the one that feels best as a starting point and customize your own combination.

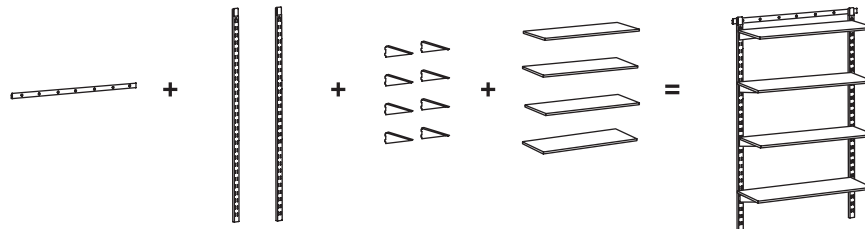

How to assemble a combination with an L-foot 25¼

Start by fastening the L-foot into the base of the two posts. Then add the brace to stabilize the combination. After that, you just hook on the brackets, put on the shelves and screw them into place.

How to calculate the width of your combination

Do you want to build a combination using an L-foot as the base? Then you have to count that every outer post measures 1¼" and the center post, an additional ½". You must also add the width of the shelves you have chosen.

WALL UPRIGHTS

How to assemble a combination with wall uprights

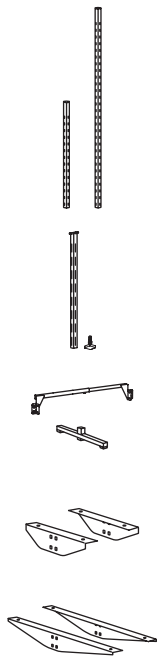

Start by fastening the suspension rail to the wall. Then hook on the wall uprights and attach the brackets. By putting on the shelves and attaching them to the brackets you can easily measure where to fasten the next wall upright.

How to calculate the width of your combination

Do you want to build a combination using a suspension rail and wall uprights? Then you have to count that every outer wall upright measures 1⅞" and the center wall upright, an additional ½". You must also add the width of the shelves you have chosen.
