

DOGHOUSE

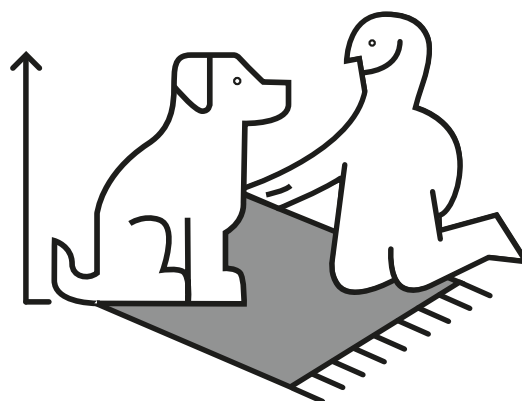

Design and Quality
IKEA of Sweden

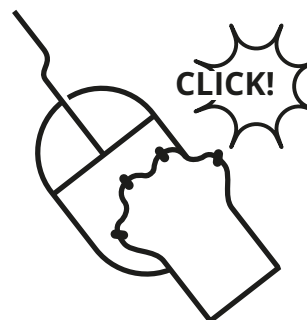

1.

First, instead of throwing away the box from the last IKEA product you purchased, check to see if it's a similar size to that of your dog. To be sure, measure your pet to see if it will be a good fit.

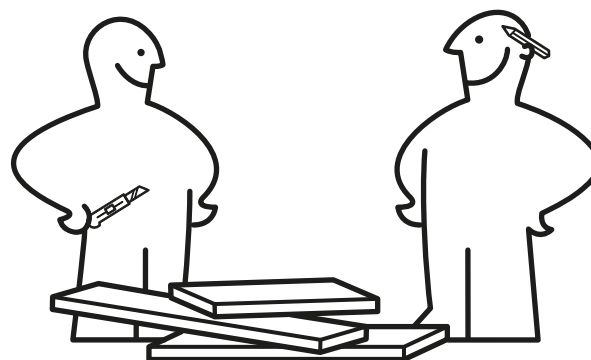

2.

Print the pattern, adjusting it to the size of the doghouse you want to build. It's so easy even your dog could do it!

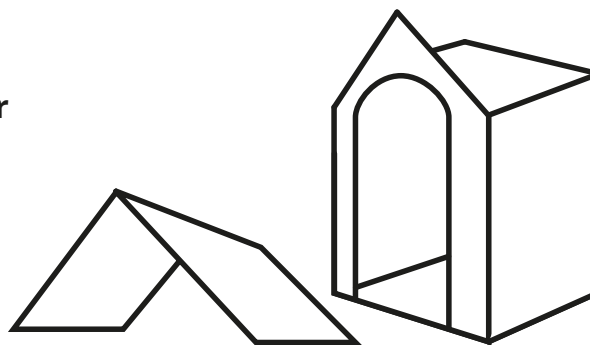

3.

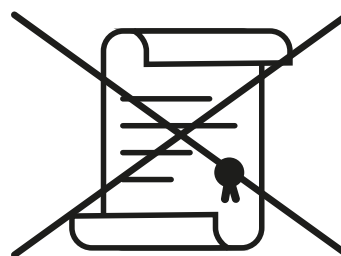

Cut the box along the lines of the pattern. If one box is not enough, you could join two together with packing tape.

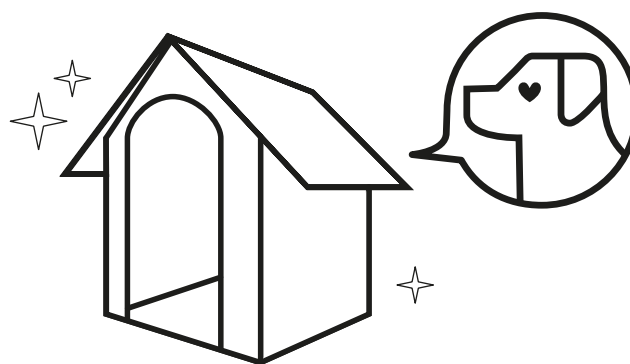

- 4.** As you know, houses are never built from the top down. And so, for a solid foundation, start your assembly with the floor.

- 5.** Then add the walls and the roof, according to the instructions. It couldn't be easier, even without an advanced degree in architecture or engineering.

- 6.** And now you have an authentic doghouse made with 100% reused material. And completely mortgage-free!

IKEA Dog House

- House made for a medium size dog, height to the head 44 cm.
