MÖCKLARP

General advice for use, maintenance and cleaning

Regular cleaning and maintenance

Due to its low porosity, MÖCKLARP is a surface that is highly resistant to common household stains.

For cleaning MÖCKLARP, it is recommended to use Q-Action® with a sponge or a sponge with soft fibers.

If the above product (or similar) is not available, use water and neutral soap.

Removing stubborn stains

For stubborn stains which, due to the time they have been there or their composition, do not disappear with daily cleaning, it is recommended to follow the table below, which details the possible types of stain and the most suitable cleaning products to remove them.

Stain	Cleaning product
Coffee, wine	Alkaline detergent, acid
Lime, cement residues, plaster	Acid
Rubber	Degreaser
Candle wax, nail polish, aluminum scratches, silicone residues, ink	Solvent
Grease, oil	Alkaline detergent, degreaser
Ice cream	Alkaline detergent
Liquids, organic residues	Conventional detergent, degreaser
Rust	Hydrochloric acid
Cola, fruit juice	Oxidant

Acid cleaning products can include any type of product that contains acid or descaling agent. Alkaline products include basic cleaning agents, ammonia, etc. Solvents can include products such as universal solvent, turpentine (white spirit), acetone, alcohol, etc. Oxidants include products such as hydrogen peroxide and diluted bleach.

General advice for use, maintenance and cleaning

Resistance to knocks

Although MÖCKLARP is an extremely resistant surface, knocks should be avoided in areas which are more exposed (corners, edges, bevels, etc.).

Heat Resistance

Recipients such as frying pans, saucepans, casseroles or coffee makers can be placed directly on the countertop surface after use.

Electrical appliances that give off the heat can also be placed on the unprotected surface.

MÖCKLARP is designed to withstand the utensil temperatures from domestic use.*

*For MÖCKLARP 8 mm, it is necessary to use protection against hot objects.

Precautions

- Avoid direct contact with metal parts of electric boilers, cooking countertops or ovens that, with a incorrect installation, get directly in contact with the material.
- Avoid very high temperature direct radiations such as chimneys, barbecues, etc.
- Avoid direct contact with flame.
- For polished MÖCKLARP, avoid prolonged contact with industrial objects at very high temperatures.
- Do not polish the surface.
- Avoid the use of sponges made from metal or with abrasive particles.
- Avoid direct cutting on the surface with ceramic knives as they are made from material with similar hardness to the countertop.
- For polished MÖCKLARP, avoid directly cutting on the surface.
- Avoid dragging or hitting cooking utensils or other objects against dark color polished MÖCKLARP countertops.
- Avoid contact with hydrofluoric acid.
- Polished MÖCKLARP can be damaged by cleaning agents containing acids, bases or salts such as sodium sulphide.
- On textured surfaces, avoid friction with objects of similar hardness to avoid degradation of the surface (gloss, luster, surface appearance, etc.).
