This guide provides you with tips and step-by-step instructions on how to install your kitchen on your own.
The step-by-step guide

Installing your new IKEA kitchen correctly
This brochure is your guide to preparing and installing your new kitchen yourself. Inside you’ll find clear steps to follow as well as useful tips and ideas. Use this guide along with your IKEA assembly instructions to make sure your kitchen is installed in the right way.

Before you begin
Go through this brochure before you begin to see what stages are involved in putting in your new kitchen and to organise what tools you’ll need. To make sure you have everything for your new kitchen, compare the packages and parts you have at home against the order list and the delivery list. You should only dismantle your old kitchen when you have all your new parts and appliances. Your kitchen parts and worktop should be stored indoors, with normal room temperature and humidity.

It’s helpful if you arrange your cabinets in the order you will be installing them. Use your order print out and IKEA home planner drawing to help you. Before you remove your old kitchen you need to make sure that your electricity, gas and water is shut off. Use a qualified professional to disconnect and connect your gas, water and electricity.

You can do it yourself but you don’t have to
Our kitchens are designed to be as simple as possible for you to assemble and install yourself. But we’re here to help as much as you’d like us to. We can offer you services ranging from planning and delivery to complete kitchen installations. For more details see the back page of this guide, kitchen section of IKEA.co.uk or contact your local IKEA store.

Once your kitchen arrives, check off your delivery to see that everything is in order.
The tools you’ll need

Below is a summary of the basic tools you’ll need. In addition you’ll find what tools to use for each product in their respective assembly instructions. It’s a good idea to wear safety glasses when using power tools. Some of the tools shown below are available to buy on store, ask your planner for details.

**Good to know**

Plaster, wood or concrete walls? Because there are many different types of walls, fixing hardware is not supplied with your cabinets. Most hardware or home improvement stores stock appropriate fixing hardware and can help you choose the right sort for your walls.

- Fine-toothed handsaw
- Measuring tape
- G clamps
- Electric screwdriver/drill
- Jigsaw
- Circular saw
- Pencil
- Rubber hammer
- Awl
- Phillips screwdriver
- Hammer
- Hole cutter – for drilling the hole for the mixer tap in the sink (35mm)

**FIXA 2-piece tool set.**
285.121.00 £11
Prepare your room

Once you’ve removed your old kitchen, prepare the room by making sure your walls and floors are even, and your walls are suitable for supporting your new kitchen. Depending on how you are going to finish your floor and walls it may be time to prime and paint your walls and tile or change your flooring.

Marking cabinet positions

Draw a layout of your new kitchen directly on the wall. Check that everything fits with the measurements from your plan and your electricity, water, gas and ventilation connections are where you want them to be. Also mark where to fasten your new kitchen’s suspension rails.

Prepare your space by making sure your corners are even and your walls and floor are straight. Use your try square for the corners and a spirit level for the walls and floor.

Make sure you note the highest point of the floor and where the corners aren’t 90 degrees.

Check your wall is strong enough to hang your suspension rail and cabinets. Depending on your wall material, it’s best to install your rail onto a stud or a support beam. An electronic stud finder can be helpful.

Make sure you leave 82cm between the highest point of your floor and the bottom of your base suspension rail.

Double-check your plumbing is where you want it and fits with your layout plan.
Mount the suspension rails

Your new IKEA cabinets can be hung directly onto a suspension rail making them easier to install and adjust. It’s important to make sure your suspension rail is straight and level, and to secure it with the right screw type for your wall.

Fasten your rails, base cabinet rails first. Make sure you’ve found suitable points in the wall where the rails can be fastened and that the rails are level before drilling.

If your wall is uneven use packers between the rail and the wall to make sure the rail is straight.

Use a spirit level to check that each rail is level.

Mounting the rails at the right height

Follow the instructions that come with the rail to find the correct mounting height for the units you have purchased.
Install your cabinets

In most kitchens it’s best to install your wall cabinets first. This way you have room to move without base cabinets in the way. One exception is if you’re installing a single line kitchen with a high cabinet at one end. In this case install the high cabinet first.

Assemble all wall cabinet frames according to the assembly instructions. Wait until later before fitting drawers, doors and internal fittings.

Hang your base cabinets starting in the corner. Hang each following cabinet in the same way. If you’re installing a corner carousel now is the time to do it.

Hang the corner cabinet first and secure by tightening the screws. Hang the remaining cabinets and connect them with the included screws. Wait to tighten the screws until the base cabinets are in place and you can ensure alignment.

Assemble all base cabinets according to the assembly instructions. Make sure to have the legs attached in the order the cabinets will be fitted.

Cabinet legs connecting two cabinets can be used to support both cabinets while you’re installing. Remember to use the distance ring included with the legs.

Make sure the right base cabinet is aligned with your plumbing.

Check that each cabinet is aligned with the previous cabinet by adjusting the legs.

If you’re using a high cabinet, fit with a cover panel first.

Some cabinets have ready-made openings for plumbing and utilities, but you can use a jigsaw to create your own openings if needed. Do this before fitting the cabinet in place. Be aware where you place openings as it can affect how you can arrange drawers in a cabinet. If you do have to cut the cabinet seal the raw edge with silicon, to make it water-tight.
Filler pieces
A filler piece is a cut down cover panel, they are used between your cabinets and walls for a streamlined appearance, and to ensure there is enough room to fully open doors and drawers. They’re especially useful if your walls aren’t perfectly straight.

Check the wall with your spirit level to see if it is straight. If the wall is even, measure between the wall and the cabinet and mark this distance at the top and bottom of the filler piece.

To ensure the filler piece stays in place, first fasten a support strip to the wall. Drill holes in the cabinet for the screws you’ll use to fasten the cabinet and filler piece together. Put the filler piece into place. Put screws through the holes you have drilled. When all your filler pieces are in, caulk around each one with silicone for an airtight seal.

If the wall isn’t level and flat, the filler piece must be cut to fit to the wall’s shape. To do this, you’ll need a filler piece, measuring tape, small block of wood about 2.5-3.5cm thick and pencil. Cut the filler piece so it’s the same height as the cabinet. Place the edge of the filler piece against the wall. Hold the block of wood flat against the wall with the pencil against it. Keep them pressed against the wall as you slide them down the length of the filler piece. Now you have traced the shape of the wall onto the filler piece. Cut along your trace line.

Place the newly cut edge of the filler piece against the wall (it should fit perfectly). Mark the edge of the cabinet on the top and bottom of the filler piece. Draw a straight line from these points and cut.

If you’re going to install a high cabinet, don’t make final adjustments or fully tighten the screws until you have installed all the other cabinets as well.

If you’re going to install a high cabinet, don’t make final adjustments or fully tighten the screws until you have installed all the other cabinets as well.
Install your worktop, sink, lighting and appliances.

With your cabinet frames in, it’s time to install your worktop, sink, lighting and appliances. Check that your worktop is the correct size before fitting it in place. Now is also the time if you need to customise your worktop for a sink or hob.

All electrical connections must be made by a qualified electrician.

Use a circular saw and G clamps to hold a straight-edge to your pre-cut worktop when you cut to customising the size. It’s helpful to use a pair of sawhorses to help you. A tip is to have a second person holding the piece to be cut off to avoid the edge from splintering.

To prevent moisture from penetrating the worktop apply polyurethane silicone across any of the sawn edges.

Mark the position of the base cabinet onto the underside of the worktop and trace the outline of your sink, according to the fitting instructions, onto masking tape.

Use a jigsaw to cut out space for your sink. It’s helpful to drill a hole on the inside corners of your outline before cutting, so you can make a cleaner cut.

Proof measure your worktop. If you have a pre-cut worktop now is the time to cut it to the right length. To avoid splinter, cut with the worktop underside facing up when using a buzz or jig saw, but with the top if using a handsaw.

Cut the hole either in the back panel or in the top of the cabinet. See the assembly instructions. For safety and functionality reasons, follow the precise instructions for installation that come with the extractor hood/fan.

Note! Always use your assembly instructions for help. All water, gas and electricity connections must be done by qualified professionals according to valid local safety regulations.

Install your lighting and appliances. If drilling holes, use a piece of wood to meet the drill as it penetrates the surface to avoid the edges from splintering.

Install the extractor hood. The extractor hoods at IKEA are installed using NYTTIG pipe and/or charcoal filter. Either ducted to the outside, called extraction, or used in recirculation mode. Each installation option is described in the assembly instructions.

Cut the hole either in the back panel or in the top of the cabinet. See the assembly instructions. For safety and functionality reasons, follow the precise instructions for installation that come with the extractor hood/fan.

Use a circular saw and G clamps to hold a straight-edge to your pre-cut worktop when you cut to customising the size. It’s helpful to use a pair of sawhorses to help you. A tip is to have a second person holding the piece to be cut off to avoid the edge from splintering.

To prevent moisture from penetrating the worktop apply polyurethane silicone across any of the sawn edges.
Install the sink into the worktop according to the assembly instructions.

Secure your worktop in place according to the assembly instructions.

Customise your worktop for your hob in the same process as for your sink. See your hob's assembly instructions for measurements and help.

Kitchen island

If you're planning for a kitchen island we have supporting brackets to fasten it firmly to the floor. Legs/plinths must then be fitted around the outside of the island.

You can use either UTBY legs or the METOD assembly kit for kitchen island. The latter is used to connect cabinets back to back, or for attaching a cover panel to the back of cabinets.

Contact your local IKEA store if you need help regarding the assembly.

Good to know

If you're installing a kitchen island, it must be secured to the floor using UTBY legs or the METOD support bracket. When attaching the frame to the floor be aware of amenities like floor heating or plumbing already installed.
Now your cabinet frames, worktops and appliances are in, fit your drawer slides into your cabinets. Remember that the slides for inner drawers and standard drawers are fitted in different ways. Once the slides are in, fit in your drawers before your doors and shelves. Finish up by adding knobs and handles as well as any other internal solutions (like wire baskets).

**Note!** Always use your assembly instructions for help.

Fasten your drawer slides, starting with your outer drawers. Outer drawer slides should be attached to the outer row of holes in your cabinet. Follow the instructions for exact placement, or use the drawer height of the drawer to guide you.

Once your outer drawer slides are in, fit your inner drawer slides. The inner drawers slides are fitted to the inner row of holes in your cabinet.

Attach the hinges for your doors.

Assemble your doors and drawers. Glass sides are available in store to create more usable space.

Fit your drawers and doors to your cabinets. For a wide range of interior solutions please consult your kitchen planner in store or visit IKEA.co.uk.

Align your doors to the correct height and width by adjusting the screws on the hinge plate.

If you're fitting a plinth now is the time to attach it. Follow the assembly instructions for help.

If you are fitting a ventilation grill, place the grill between two pieces of plinth.
You’re done! Congratulations on your new kitchen!

Caring for your cabinets
Clean the doors, cabinet interiors and wood surfaces with a soft, damp cloth. Only use cleaning products intended for these materials. Do not use products that contain ammonia, alcohol, bleach or abrasives. Rinse with clean water, then dry with a clean, dry cloth. Make sure to clean up spills quickly.

Keep your sink sparkling
After each use, wipe the sink clean with a cloth or sponge damped in water or a non-abrasive detergent, if necessary. Rinse the bowl with water and then wipe the sink with a dry cloth. Avoid scouring-powder, steel wool, or hard objects which can scratch the stainless steel surface. The damp surface can be discoloured if substances containing iron, such as steel wool, nails or gravel, are allowed to remain on it. Discolouration is caused by the foreign material.

Long-lasting worktops
Keep your worktop in top condition by cleaning spills quickly with water and a mild detergent. Be sure to keep them as dry as possible after use. For wood and solid wood worktops use BEHANDLA wood treatment oil. The oil protects the wood from marks, stains and cracks, and prevents water from penetrating the surface.

You’re done!
Time to step back and admire your new kitchen – and admire yourself for saving so much money by assembling and installing it yourself! With a little care and maintenance your new IKEA kitchen will keep looking its best for many years to come.
Our broad service offer gives you the freedom to decide how much you want to do yourself and how much you want us to do for you.

Below you’ll find all the services that we can offer, and how much each of them costs.

**MEASURING**

Want to be sure that the plans for your kitchen or office are as accurate as possible? We’ll check for you: from placement of windows and doors, to power sockets and radiators for just £20

For more information, just ask a co-worker in store.

**KITCHEN PLANNING**

Our team of kitchen specialists can help plan your new kitchen using our online planning tools for **free in store**. Just go to IKEA.co.uk to see a list of available appointments.

Can’t make it in store? Just arrange a Skype, email or telephone planning session with one of our kitchen specialists for £20. And if you need a little more time, we can arrange an at home 2-hour session with one of our specialists for just £40

**DELIVERY**

We’ll deliver to the room of your choice, on a day that suits you best. Prices £25 or £35 dependent on your postcode.

**PICKING WITH DELIVERY**

With our picking with delivery service, all you have to do is place an order of what you want to purchase. We’ll handle the rest. Prices £35 or £45 dependent on your postcode. Ask in store for details.

**KITCHEN INSTALLATION**

Our comprehensive installation service saves you time, especially on trickier jobs. Thanks to the free 5-year workmanship guarantee, you can be confident that everything will meet the highest standards. To get a pricing breakdown and quote, just ask a kitchens co-worker in store.

---

**FINANCE**

Sometimes your big dreams might need a little extra credit. If you need some help spreading the cost, just ask a co-worker about our finance options when you are in store, or visit IKEA.co/services for details.
