IKEA 300 – core functionalities for everyday chores

Need a hand getting food on the table for a hungry family, clearing the air after baking with the kids, or dealing with those deserted food containers left on the counter? When days are full of activity, it helps to have reasonably priced appliances that deliver great results with minimal effort. Our IKEA 300 appliances offer core functionalities to make daily chores easier – without breaking the bank. You get reliable performance and modern convenience for your everyday needs.

IKEA 500 – all-purpose features to simplify life

Wish you could get more out of your appliances? Everyday kitchen tasks become easier and more enjoyable with versatile products like a true fan oven with added steam for better baking, or a no-frost fridge/freezer designed for easy upkeep and speedy cooling after major grocery runs. Our IKEA 500 range enhances daily life in the kitchen with the perfect blend of all-purpose functionality and stylish aesthetics. All this, backed by a free 5-year guarantee!

IKEA 700 – extra everything

Ready to go all in? With high-end appliances like hobs with integrated extractors and ovens offering full steam and air fry, you'll achieve mouth-watering results. How about a French door fridge/freezer that fits all your groceries? Or a third dishwasher level to handle more cleanup? Ideal for large families and heavy entertainers, IKEA 700 appliances make chores effortless and infinitely more enjoyable, with superior functionality that inspires you to go above and beyond.

Whatever your choice, you can be sure your appliance is made to last. Our entire range comes with a free 5-year guarantee (except TILLREDA and LAGAN).

Ovens

Replacing your old oven or looking for appliances for your new kitchen? Consider these things before you choose:

How you cook and which functions you use most

Is there something you wish would work better – faster cooking, crispier vegetables, or more even baking? Air fry ovens blast hot air all around your food for crispy results with almost no oil – perfect for fries, wings, and veggies. Steam ovens use gentle steam to cook at lower temps while locking in moisture and nutrients for juicy fish or crusty bread with a soft centre.

Your kitchen's size and layout

Where do you want your new oven – and does it fit there? For smaller kitchens, a compact oven may be your best solution (also great as an extra oven when cooking for a crowd).

The style

In our range, you'll easily find an oven that matches your traditional or contemporary kitchen, and you can pair it with a design-coordinated microwave or combi oven.

Maintenance

Pyrolytic self-cleaning burns away grease and food scraps, leaving only ash to wipe away. Hydro-clean uses steam to gently loosen residue.

5

Whatever your choice, you can be sure your appliance is made to last. Our entire range comes with a free 5-year guarantee (except TILLREDA and LAGAN).

Reliable quality, free guarantee - and a few maintenance tips

We're so confident in the quality of our ovens that we have included a 5- or 2-year free guarantee. Our own test lab runs rigorous safety and cooking tests to ensure every product is easy to use, reliable, and delivers great results. With our suppliers we combine technical expertise and life-at-home insights to create appliances for all life stages and budgets. We offer the coldest oven glass in the industry with children's safety in mind and lead the way with EPS-free packaging for almost (97%) our entire range.

You can rely on our quality, but there are a few simple things you can do yourself to keep your oven shipshape. For regular cleaning, use warm soapy

water or a mild oven cleaner. Clean racks and check the door seal for crumbs or grease. If your oven has a self-clean or steam-clean function, run it as recommended - they burn or loosen residue that you can simply wipe away with a piece of cloth. Treat your oven well, and it'll reward you with years of dependable cooking!

From delivery and installation to spare parts, we're here to help. Explore our services that make it easy to bring your appliance home, get it set up, and start using it.

IKEA Performance levels for ovens

IKEA 700 – Extra everything for extra enjoyment

Aspiring chef or busy family? With a feast of functions and features, the IKEA 700 level is perfect if you want to upgrade your culinary game. Choose from built-in ovens with steam, air fry or pyrolytic self-cleaning functions – or get them all in one!

The built-in 2-in-1 combi microwave oven saves space and time – cook, grill, reheat, and air fry in one. An intuitive touch display makes cooking easy, whether you use assisted cooking or take full control of time, temperature, and programs.

You can add accessories that allow you to make the most of your oven: an air fry tray for crispier results, a food probe to know when the food's perfectly cooked or baked, telescopic rails for safer handling, baking trays in different depths, and a wire shelf for flexible cooking.

IKEA 700: Air fry function, Grill function, Forced air, top & bottom heat, some come with Pyro function, one comes with Full steam and, one comes with combi steam, wide offer of recipe cooking - Control panel full touch, soft closing door, big package of accessories.

IKEA 500 – All-purpose features to simplify life

IKEA 500 ovens combine versatile features to make cooking easier and more inspiring, whether you're baking, roasting, steaming, or cleaning with the pyrolytic self-clean function. True fan ovens ensure exceptional browning while locking in moisture, and steam options add a deliciously crisp surface. With a LED display and responsive touch buttons it's easy to adjust settings and keep an eye on your cooking. Combine your oven with an IKEA 500 microwave for quick heating, reheating, and defrosting,

with grill functions for perfectly seared results. For smaller kitchens, GÅTEBO is a freestanding microwave, offering grilling and air frying in a compact, stylish design.

Take your cooking to a new level by using a semi-extendable telescopic rail that makes loading and removing hot dishes safer, and baking trays and wire shelves let you cook a variety of dishes on multiple levels.

IKEA 300 – Core functionalities for everyday chores

IKEA 300 level deliver core functionality and modern convenience for everyday cooking, with options ranging from standard models to those with fan for faster, even heating and pyrolytic self-cleaning for extra ease. IKEA 300 microwave ovens reliably heat, reheat, and defrost while saving time and effort. Just give the knobs a quick twist to set your oven exactly how you like it.

Types

Air fry ovens

Invite friends and family to a crispy feast – fries, spring rolls, chicken wings and roasted veggies – yum! With the air fry function, every dinner becomes an occasion where you try new flavours together.

Steam ovens

Experience our wide offer of Steam, the super hero oven with Full steam lets you choose steam level, so you can explore a wider range of dishes – enjoy juicier meats, crisper crusts, fluffier rice, al dente veggies – and preserved nutrients in every bite. Or discover the Combi oven, the added steam or the hydro steam.

Ovens with assisted cooking

Short on time? With the assisted cooking function, just pick your dish, pop it in the oven, and you're set for playtime with the kids, hanging with friends or finishing up work –stress-free!

Pyro oven

Pyrolytic self-cleaning does the job for you by burning away grease and food scraps, turning them into ash – just wipe clean! A welcome time-saver that keeps your oven looking like new.

Steam like a pro

What are the benefits of steam in an oven, and how can the different steam functions be used? We asked the one co-worker who probably knows the most about cooking – our very own IKEA head chef.

Daniel Yngvesson, food designer by title, helps develop both the food items you can purchase in the Swedish Food Market and the dishes you order in the restaurant – overseeing everything from plating to how aromas, flavours and textures are experienced and enjoyed. As a professional chef, he's been using steam for years. Now that it's available for home kitchens, he couldn't be more excited.

– Steam makes so many things easier, tastier and better. Cooking just becomes more fun!
Steam preserves taste and nutrients.
There are several steam functions that meet different needs.
– Generally speaking, steam gives juiciness but not a crust. So if, for example, you want to cook chicken, it's a good idea to start with a combination of steam and convection, then finish off using just convection or the grill function. This makes the meat juicy with a crispy, browned surface," Daniel explains.

Full steam provides gentler cooking compared to conventional oven cooking without steam, as the temperature is lower and the cooking time shorter – which also saves energy.

– When you steam vegetables like broccoli, they keep their texture and flavour – and compared to boiling, where vitamins and minerals easily end up in the water, steaming helps preserve more of the nutrients too.

Dare to experiment in the kitchen

Here's a tip: cook rice using full steam in the oven – instead of on the stove.

– It has a lot of advantages. There's no risk of it boiling over or burning, and there are fewer dishes afterwards if you cook it directly in an ovenproof serving dish. For the best result, I usually go with equal parts rice and water.

Daniel's best advice is to dare to experiment and try things out.

– There are so many possibilities, and once you start using steam, you almost get addicted. Daniel says, smiling.

Microwave ovens

Microwave ovens aren't what they used to be. In fact, they've become much better – a wide range of functions lets you grill, bake, steam and crisp your go-to in the kitchen when your tummy starts to rumble. Melt chocolate for a tasty cake, defrost a casserole for dinner or reheat yesterday's leftovers in a flash – all with a simple touch of a button.

When choosing a microwave oven, consider the following:

01

How often do you use your micro, and for what kind of food? We have everything from very simple, easy-to-use micros to more advanced microwaves with lots of different functions.

02

How much food do you cook at the same time? With a microwave oven you can have all in one or get an extra oven when the big family comes to visit.

03

What style do you prefer? No matter if your kitchen goes in a more modern or classic fashion, we have micros that will match perfectly.

5

Whatever your choice, you can be sure your appliance is made to last. Our entire range comes with a free 5-year guarantee (except TILLREDA and LAGAN).

Sustainability

Make good habits a natural part of life at home with the help of a microwave oven. Reheating leftovers is easy and helps to cut down on food waste.

Tips

Are you aware that placing a built-in microwave in a high or wall cabinet, is a smart use of space – but also a way to create an ergonomic and smooth workflow that’s just right for you.

Built-in microwave

Your go-to in the kitchen when your tummy starts to rumble. Melt chocolate for a tasty cake, defrost a casserole for dinner or reheat yesterday’s leftovers in a flash – all with a simple touch of a button.

Freestanding

Boost your cooking options with a freestanding microwave. Its plug-and-play setup is perfect for small spaces, easy to install, and simple to tuck away when not in use.

Quick and tasty cooking in small spaces

Crunchy vegetables, crispy pizzas or fluffy pancakes? With GÅTEBO microwave oven, you can shine even in the smallest kitchen space. We added several smart functions so you don't have to make room for many different appliances in the kitchen.

Nanette Weisdal works in the development of our kitchen range. One important part of her job is to research people's lives at home around the world – what they eat, how they use their kitchens and how their needs change over time.

– What we see now is that many people live in small spaces in large cities, with all conveniences just around the corner. Many times, they buy take-away food that only needs heating at home, and they don't spend much time cooking during weekdays.

Easy to prepare for hungry teenagers

Another insight is that many children and teenagers come home earlier than their parents and need something filling quickly. "Heating a large oven takes time, but with GÅTEBO, hungry teenagers can easily warm up yesterday's leftovers or prepare another tasty dish. Thanks to the air frying function, they can even cook crunchy vegetables or french fries, without having to deal with hot oil."

Plug it in anywhere

The multifunctional microwave oven is also super easy to install.

– We see that many people, especially young students, don't even have access to a proper kitchen. GÅTEBO is plugged into a standard wall socket and gives you several functions, like grilling and convection. When you move, you can simply bring it with you – or pass it on to the next tenant.

Even in a spacious kitchen, it's handy to have an appliance that combines several functions into one.

– Yes, when you actually have time to cook from scratch, there's more space on the worktop for chopping veggies and other preparations. Then, cooking becomes more fun.

Hobs

A cook's best friend, the kitchen hob is central to everyday cooking. Our energy-saving induction hobs deliver fast and precise cooking results, are very easy to use and include all the functions you may need. Each has its own unique features and a variety of sizes – choose between one to several flexible zones – to perfectly suit your kitchen and your cooking style.

When choosing a hob, consider the following:

01

How often do you use your hob? We have everything from mobile one-zone hobs to high-end gas and induction hobs.

02

How much food do you cook at the same time? You can choose to have a small hob with 1 or 2 zones to extra wide hobs for large pots and pans.

03

What type of chef are you? If you're the one who wants total control choose an induction or gas hob. You can also choose hobs with flexible zones, which adapts to the shape of the pot or pan.

5

Whatever your choice, you can be sure your appliance is made to last. Our entire range comes with a free 5-year guarantee (except TILLREDA and LAGAN).

Not all zones can be used simultaneously at high power

The cooking zones are paired into 2 groups (left or right), each which is connected to a phase with a maximum power supply. If you are using more than one zone connected to the same phase, a power management system kicks in to ensure they do not exceed the maximum power supply. This means that the power of the previously activated cooking zone will be reduced. If you want maximum power in two pans, they need to be in opposite groups.

What's that noise?

When your induction hob makes noises, it is perfectly normal. You may hear a low humming sound, whistling or ticking. It is all part of the induction technology and simply means your hob is doing its job. If you are curious, have a look in the user manual and get acquainted with the different types of noises and why they occur.

Sustainability

Save time and energy while you cook!
Like to cook but don't always have enough time? Induction hobs heat up your pots and pans in a super efficient way. That means faster cooking and more time to sit and enjoy great home cooked meals with family or friends. Because induction hobs only heat your cookware, they are energy-efficient, and they are safer.

Types

Induction hobs

Induction hobs are up to 50% faster and 40% more energy efficient. With just one touch you can select features and regulate the heat in an instant.

Induction hob with integrated extractor

With an integrated extractor there's no need for a hood over the cooking area – perfect for a kitchen island, giving you an overview. The integrated extractor automatically adjusts the extraction capacity to the heating level on the hob.

Gas hobs

Gas hobs are more than a professional-looking feature for ambitious cooks, they provide quick heat control needed for searing and frying.

Induction hobs key features

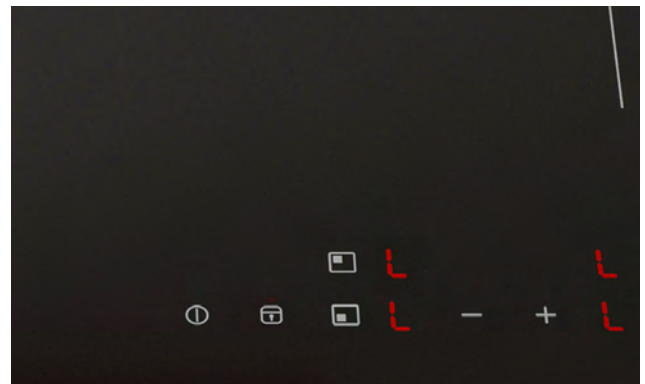

A **portable** hob is perfect for smaller kitchens or wherever you need an extra cooking zone. It's easy to move around and can be stowed away when not in use to free up counter space for other activities. Just plug it in wherever you need it.

Depending on your needs and how much food you cook at the same time, choose a hob with **enough cooking zones**. We have hobs with 1, 2, 3, 4 and 5 zones. Also think about the width of the hob: the bigger the hob is, the more space you'll have for pots and pans.

When you press the **pause** function, all activated zones are paused – and when you press the pause button again, the zones will come back to the same temperature as before. That way you can suspend the cooking process if you're interrupted, and re-start again in an instant.

When you press and hold the **child lock** button, you can't start the hob or change the temperature. To unlock the hob, press the child lock button again for 4 seconds. This is also a good function to use when you're cleaning the hob surface and don't want to switch on any zones.

Get excellent control when you cook with the **individual timers** allowing you to time each zone separately. Ideal for boiling eggs, rice or pasta.

The **touch and press control panel** allows you to regulate the heat easily and precisely by just touching the + and – symbols.

Just slide your finger on the **touch and slide control panel** and the heat will adjust accordingly. With just one touch you can select features and regulate the heat in an instant.

An integrated extractor gives you a good overview since there is no hood over the cooking area. It adjusts automatically to the heating level on the hob – the higher the heat, the more powerful the extraction capacity.

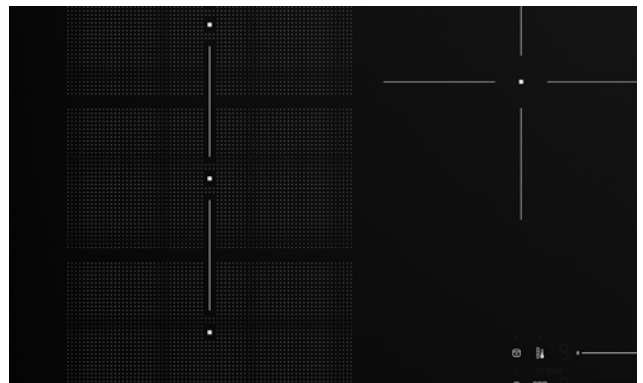

The **bridge** function gives you the flexibility to use larger and different pots for special recipes or occasions as it allows you to connect 2 cooking zones into 1 large one when needed.

Vary the cooking surface by using the **flexible heating zones**. You can use them together or separately, and adapt them to pots and pans in different shapes and sizes.

The **power booster** delivers additional power to a single cooking zone, perfect for boiling water. The booster can be set with just one touch.

If you like cooking, you'll love the **pre-set cooking mode**. Adjust to low, medium or high heat simply by moving the pot or pan on the multi-flex zone. The hob will remember the power settings next time you activate the function.

Extractor hoods

Planning to replace or buy a new extractor for your kitchen? This guide will help you find the solution that suits you and your kitchen the best.

There are wall-mounted, ceiling-mounted and integrated extractor hoods, or induction hobs with a built-in extractor (see page XX). Your options depend on what kind of hob you have and where it is (or will be) placed. If your cooking area is installed in a worktop along the wall, you can choose any type of extractor hood. If it's in a kitchen island or peninsula, your options are a ceiling-mounted hood or a hob with integrated extraction. If you have a gas or glass-ceramic hob, you'll need an extractor hood. Just make sure there's enough wall space – a hood needs to be as wide, or wider, than the hob to work efficiently.

Also consider what performance is sufficient for your cooking style, which design you prefer, and which features you'd like.

When choosing an extractor hood, consider the following:

01

How wide is your hob? The width of the hood should be as wide or wider.

02

What does your kitchen look like? If you have an open plan home, make sure to choose a hood with a low noise level.

03

Extraction or re-circulation? Find out if you can connect the extractor hood to a valve that leads the air out of the building. If not, you need to install a charcoal filter in the extractor hood, which takes away the grease and odour from the air and lets it out in to the room again.

5

Whatever your choice, you can be sure your appliance is made to last. Our entire range comes with a free 5-year guarantee (except TILLREDA and LAGAN).

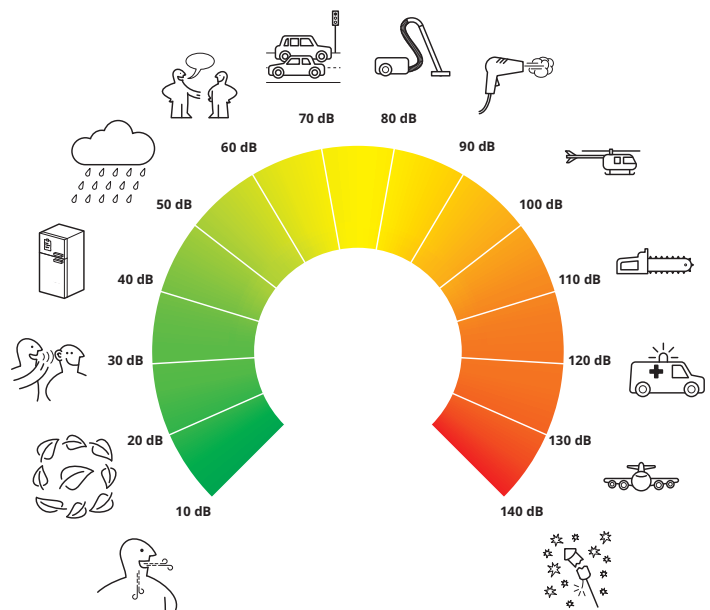

Sound levels

Sensitive to noise or have an open-plan home? For extractor hoods, a noise level below 60 dB is considered low – roughly equivalent to a normal conversation between two people.

We measure the noise level of our hoods at max speed, making it easier to compare different models.

Note that sound levels decrease at lower speeds, and recirculating hoods are typically louder than those vented outdoors. Noise may also increase if the ducting is long or has several bends, as the air has to work harder to pass through the system.

Decibel levels are listed in the product information so you can compare and choose the hood that's suitable for your needs and comfort.

Tip/awareness

Every 6 dB-increase in sound will double the perceived sound level. In other words, 66 dBs is perceived as twice as loud as 60 dBs; and 72 dBs is perceived as 4 times louder than 60 dBs.

Types

Built-in extractor hood

If you want a uniform look in your kitchen, choose a built-in extractor hood. Install it in a cabinet with a front that matches the rest of your kitchen and use the extra storage space for things you need close at hand when cooking.

Wall-mounted extractor hoods

Our wall-mounted extractor hoods come in many shapes, styles and sizes. Choose a unique piece or one that matches the rest of your appliances and your kitchen. Just make sure it has the same size or is wider than your hob for optimal performance.

Ceiling-mounted extractor hoods

A ceiling-mounted extractor hood is a great solution when you have your hob installed in a kitchen island or peninsula.

Tips

Did you know that turning on the extractor hood 5 minutes before you start cooking will make it work more efficiently? Turning it on will circulate the air and allow the extractor hood to more effectively catch cooking odour and draw it directly into the fan. It is also a good idea to let the extractor hood run for 10 to 15 minutes after cooking allowing it to absorb residual particles in the room.

Key features

The majority of our extractor hoods have energy efficient **LED lighting**. This type of lighting normally lasts as long as the extractor hood does, and it illuminates the entire hob to make cooking easier.

Booster function cranks up extraction for a few minutes to quickly clear cooking fumes – perfect when you're frying and guests are on the way.

A hood with dimmable LED lights up your cooking area and lets you set the right mood when you're not cooking, perfect for dining or socialising.

Touch control makes it easy to adjust extraction speed and light also when your fingers are deliciously sticky from cooking or baking.

All IKEA extractor hoods come with dishwasher-safe grease filters. By cleaning grease filters regularly, you can maintain efficient airflow, so cooking fumes make a quick exit.

The majority of our extractor hoods can be installed in two ways: ducted to the outside or in recirculation mode fitted with charcoal filter.

Powerful AND quiet? Quite so.

With our low noise extractor hoods, kitchen conversations can be kept at a comfortable level.

Is your extractor hood working at its best?

A greasy filter can slow things down. When clogged, it's less effective at removing smoke, cooking fats and odours. It can even increase fire risk. A quick clean every 2-3 months (or more often if you're a fan of frying) keeps it running smoothly – and your kitchen smelling fresh. All IKEA extractor hoods have removable, dishwasher-safe grease filters. Prefer to wash by hand? Just use warm water and a little washing-up liquid. Let the filters air dry, then pop them back in!

Fridges and freezers

IKEA fridges and freezers don't just keep your food fresh for longer - they also help you minimise food waste through smart functionality and interiors that make it easy to see what food you have. Our fridges and freezers come in a variety of types and sizes, freestanding as well as for built in installation, so that it will be easy for you to find the perfect match, whether you are replacing your current appliance at home or planning a completely new dream kitchen.

When choosing fridges and freezers, consider the following:

01

How much food do you normally store in your fridge and/or freezer? How many are you in the family? How often do you shop? We have different sizes and capacities to choose between.

02

Do you need any specific function or accessories to simplify storing or organising your fridge/freezer?

03

What do you prefer and what works in your kitchen? Choose between freestanding appliances creating a design statement in your kitchen, or integrated adding to a streamlined and uniform look.

5

Whatever your choice, you can be sure your appliance is made to last. Our entire range comes with a free 5-year guarantee (except TILLREDA and LAGAN).

Sustainability

Did you know that approximately a third of all food produced in the world is not eaten? That's like dumping every third bag of groceries straight into the bin! IKEA fridges and freezers are full of smart functions to help you keep food fresh and tasty longer. By reducing food waste, you save money and time spent grocery shopping.

Tips

Did you know that you can keep your food fresh for longer in a fridge with built-in fan cooling? The fan circulates the cool air and keeps the temperature consistent throughout the whole fridge. And as the temperature is the same everywhere, you can store your food and beverages exactly where you want it.

Did you know that most of our freezers have built-in no frost technology? The no frost function automatically regulates the humidity levels and minimises the build-up of ice and frost.

Types

Integrated

If you want a uniform expression throughout your kitchen, you can choose a fridge or freezer for **integrated** installation.

Integrated under worktop

If you have a small kitchen, or don't cook that much, you can install a small fridge or freezer between two base cabinets **under the worktop**.

Freestanding

Freestanding appliances are easy to install – just put it where it fits and plug it in. Generally, freestanding fridges/freezers also offer more storage volume than integrated options.

Key features

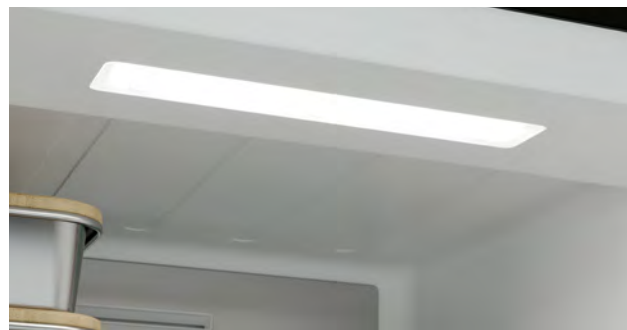

Tired of chiselling out frozen food or finding time to defrost? The **no-frost** technology regulates humidity to stop ice build-up. No more defrosting or water mess – your fridge/freezer looks after itself, saving you time and keeping food fresh.

Are you a careful fridge organiser or more of a “throw it all in” person? **Fan cooling** circulates air, so you don't have to worry about uneven temperatures. Everything stays consistently chilled, keeping food fresh longer and reducing waste.

A **bottle rack** lets you store bottles just below the shelf to save space. With cold air vents right behind it, they stay perfectly chilled.

Integrated **LED lighting** lights up every corner, making it easy to find what you need – and it will last the lifetime of the fridge.

What do the functions mean?

Fan cooling circulates the air for an even temperature throughout the fridge so you can make the most of every bit of space.

Freezing capacity in kilograms per 24 hours.

The fast cooling function chills new groceries fast and protect what's already in the fridge from warming up.

The fast freeze function quickly freezes new food. This preserves flavour and keeps the rest of your freezer content from warming up.

If the door is left ajar, the door alarm will remind you to close it before the temperature rises and food goes bad.

The adjustable humidity drawer lets you control moisture levels, keeping your fruits and veggies fresh longer.

The low-temp drawer keeps things 1-2°C cooler than the rest of the fridge, giving meat, fish and beverages the ideal chill.

Vacation mode keeps your empty fridge odour-free while you're away, with the freezer still running as usual.

Interior accessories

Don't forget all the yummys in the back of the fridge! This shelf pulls out and revolves, so you can see and reach the smallest jars hiding in the back. A smart addition to your fridge or cabinet.

SNURRAD storage turntable, transparent.

It's all in the drawers!

Want to keep your food fresh longer? The adjustable humidity drawer can make a big difference for fruits and veggies. For produce that spoil fast, like apples, pears and avocados, set the humidity low to reduce moisture. For leafy greens and veggies that wilt, turn it up to lock in freshness. The low-temp drawer is perfect for extra-chilled meat, fish or beverages. Use these drawers right, and your food will stay fresh and happy!

Dishwashers

Our dishwashers are designed to fit perfectly with your kitchen, either integrated with the same style front as the rest of your kitchen, freestanding or built-in under the worktop. The tall interiors provide generous space for dishes and there are several clever features like the delayed-start function that allows you to run the dishwasher when you want to take advantage of off-peak utility rates. There's also an AutoOpen function that automatically opens the door at the end of the cycle to improve drying performance.

When choosing a dishwasher, consider the following:

01

How much space do you have and how many people live in the household? Our range includes dishwashers in different sizes and volumes and for both integrated and freestanding installation.

Sustainability

A dishwasher uses less water and energy than washing dishes by hand. You'll save both time and water with a dishwasher taking care of the dinner aftermath for you. Our dishwashers vary in energy class from A to E, see more information in the product details.

5

Whatever your choice, you can be sure your appliance is made to last. Our entire range comes with a free 5-year guarantee (except TILLREDA and LAGAN).

02

What specific functions are important to you? Perhaps a third level to maximise loading capacity? A dishwasher that is as quiet as possible? Or a dishwasher with delay start function so you can run it at night when everyone is asleep?

Tips

Did you know that most of our our dishwashers are made for integrated installation? You can fit them with the same front as the rest of your kitchen to create a uniform look throughout.

Did you know that by running the Machine Care programme regularly, you remove limescale, grease and food remnants that can cause odour or malfunction.

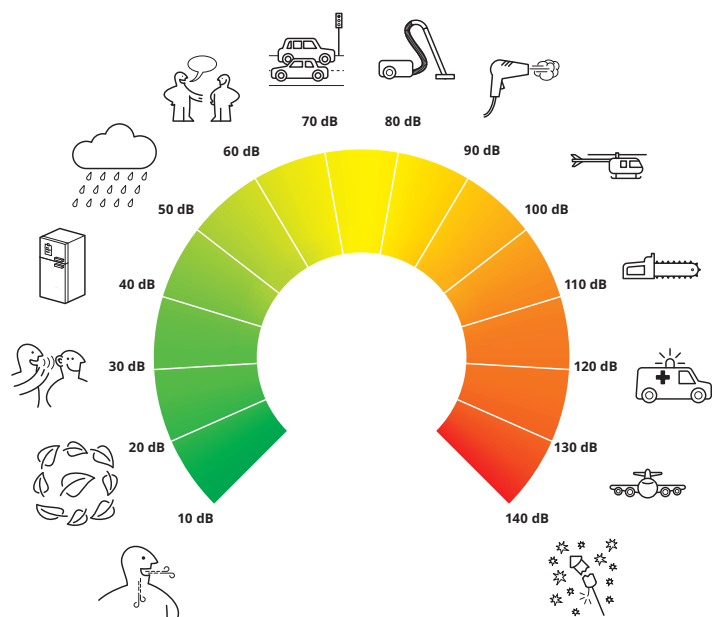

Sound levels

Sound levels for appliances are measured in decibels (dBs). As the operating programme influences the dB level, all our dishwashers are tested according to standard while operating the ECO programme. The dB levels are listed in the product information so you can compare and choose the dishwasher that's suitable for your needs and comfort.

Tip/awareness

Every 6 dB-increase in sound will double the perceived sound level. In other words, 66 dBs is perceived as twice as loud as 60 dBs; and 72 dBs is perceived as 4 times louder than 60 dBs.

Key features

Choose between an **integrated, built-in** or **freestanding** dishwasher depending on your kitchen space.

What size dishwasher fits your kitchen? At IKEA you can choose between 45 or 60 cm wide dishwashers with either 2 or 3 levels for loading dishes inside.

All our dishwashers have height adjustable upper baskets, so you can make room for plates and glasses of different sizes as well as bulkier items.

A **pull-out cutlery rack** at the top of the dishwasher is ideal for flatware, utensils and much more, giving you more space and flexibility.

Towards the end of the program, the **automatic door opening** function makes sure dishes dry as quickly as possible.

The **mineral drying** feature uses minerals to produce heat and efficiently dry the dishes. The minerals will last the entire lifespan of your dishwasher.

The **delayed start** function allows you to run the dishwasher when you want. Our dishwashers have delay options from 3 up to 24 hours.

LED lighting inside the dishwasher provides a nice and convenient light when you put in and take out the dishes.

Most IKEA dishwashers have a built-in water stop system that detects any leakage and automatically stops water flow.

With the **beam on floor** function, a beam of light shines on your floor when the dishwasher is running.

The **time beam on floor** function projects a beam of light on the floor telling you the remaining time of the washing program.

Programs

AUTO

For all types of dishes – crockery, cutlery and pots and pans.

ECO

A more sustainable, water-saving option. For normally dirty crockery and cutlery.

INTENSIVE

For all types of dishes – crockery, cutlery and pots and pans – when they're really dirty!

RAPID

Perfect if you're in a hurry or have a lot of dishes. For recently used crockery and cutlery.

1 HOUR

For mixed tableware and cutlery with lightly dried-on food remnants.

GLASS

For delicate crockery and glassware that's not too dirty.

PRE WASH

This is a pre wash for very dirty crockery.

SILENT

Extra quiet – ideal for open plan homes or when your dishwasher is close to where you eat. For normally dirty crockery and cutlery.

MACHINE CARE

This program performs dishwasher maintenance by cleaning the interior of the dishwasher using hot water.

Additional features

DRY PLUS

A higher temperature during the final rinse and an extended drying phase ensure the drying performance, even for plastics.

EXTRA HYGIENE

A higher temperature (70°C) for at least ten minutes during the last rinse provides an extra good hygienic and disinfecting result.

SAVE TIME

Shortens the washing time by up to about 66 percent, depending on the program you choose.

INTENSIVE ZONE

Extra intensive washing in the lower basket, perfect for very dirty dishes such as pans and baking dishes.

HALF-LOAD

Use this program with small loads. The running time is shortened, energy and water consumption are reduced. It is recommended to add less detergent than with a full load.

EXTRA SILENT

This option decrease the water pressure, therefore providing a more sensitive and silent wash.

POWER CLEAN

Improves the dishwashing results of the selected program by increasing the wash temperature and duration.

Washing machines and tumble dryers

With our washing machines and tumble dryers you can rest assured that your favourite clothes and special fabrics will be well taken care of. The user-friendly functions and special programs will make your laundry chores easier. Choose between a freestanding or a built-in solution that will blend in perfectly with the rest of the room.

We have washing machines with different load capacity, tumble dryers and combined washer/dryers, for your everyday laundry needs.

Tips

Did you know that our washing machines sense the amount of laundry in the drum? This allows them to adapt water volume and washing time to always wash as energy efficiently as possible.

5

Whatever your choice, you can be sure your appliance is made to last. Our entire range comes with a free 5-year guarantee (except TILLREDA and LAGAN).

Key features

Washing Capacity

Choose the appliance with the washing capacity that suits your laundry needs. 1 kg laundry capacity is the approximate equivalence of one full set of everyday clothes.

Drying Capacity

Choose the appliance with the drying capacity that suits your laundry needs. 1kg laundry capacity is the approximate equivalence of one full set of everyday clothes.

Maximum spin speed (RPM)

Indicates how many times the drum inside your washing machine spins per minute. Higher RPM-number equals less water remaining in your clothes when the washing cycle is completed.

Steam function

The steam function quickly and gently makes your laundry fresh and removes wrinkles and creases.

Water stop system

Water stop system detects any leakage and automatically stops water flow.

Delayed start

Gives you the option to delay the start of your laundry to when it suits you.

Guarantee appliances

5

Appliances have a 5-year guarantee.

How long is the guarantee valid?

This guarantee is valid for five (5) years from the original date of purchase of the IKEA appliance from IKEA. LAGAN and TILLREDA appliances have a two (2) year guarantee, valid from the original date of purchase. The original sales receipt is required as proof of purchase. If service work is carried out under guarantee, this will not extend the guarantee period for the appliance, or for the new parts.

What is covered under this guarantee?

The guarantee covers faults of the appliance, which have been caused by faulty construction or material faults from the date of purchase from IKEA. This guarantee applies to domestic use only. The exceptions are specified under the headline "What is not covered under this guarantee?"

Which appliances are covered under this guarantee?

The free five-year (5) guarantee is valid for all domestic IKEA kitchen appliances and covers defects in materials and workmanship.

Which appliances are not covered under this guarantee?

For appliances named LAGAN and TILLREDA, a guarantee is valid for two years from the date of purchase.

What will IKEA do to correct the problem?

The designated service company will examine the product and decide, at its sole discretion, if it is covered under this guarantee. If considered covered, the designated service company through its own service operations, will then, at its sole discretion, either repair the defective product or replace it with the same or a comparable product. Within the guarantee period, the costs to remedy the fault e.g. repairs, parts, labour and travel will be covered, provided that the appliance is accessible for repair without special expenditure. On these conditions the EU guidelines (Nr. 99/44/EG) and the respective local regulations are applicable. Replaced parts become the property of IKEA.

If the designated service company repairs or replaces the appliance under the terms of this guarantee, the designated service company will re-install the repaired appliance or install the replacement, if necessary. The operation is covered if the product is easily accessible for repair. If the product is installed in a not standard built-in solution the customer has to make the product accessible before the service visit.

Who will execute the service?

The designated service company will provide the service through its own service operations or authorized service partner network.

What is not covered under this guarantee?

- Deliberate or negligent damage, damage caused by failure to observe operating instructions, incorrect installation or by connection to the wrong voltage, damage caused by chemical or electro-chemical reaction, rust, corrosion or water damage including but not limited to damage caused by excessive lime in the water supply, damage caused by abnormal environmental conditions.
- Consumable parts including batteries and lamps.
- Non-functional and decorative parts which do not affect normal use of the appliance, including any scratches and possible colour differences.
- Accidental damage caused by foreign objects or substances and cleaning or unblocking of filters, drainage systems or soap drawers.
- Damage to the following parts: ceramic glass, accessories, crockery and cutlery baskets, feed and drainage pipes, seals, lamps and lamp covers, screens, knobs, casings and parts of casings. Unless such damages can be proved to be due to production faults.
- Cases where no fault could be found during a technician's visit.
- Repairs not carried out by our appointed service providers and/or an authorised service contractual partner or where non-original parts have been used.
- Repairs caused by installation which is faulty or not according to specification.
- The use of the appliance in a non-domestic environment i.e. professional use.
- Transportation damages. If a customer transports the product to their home or other address, IKEA is not liable for any damage that may occur during transport. However, in case of IKEA delivery of the product to the customer's delivery address, then eventual damages to the product that occurs during this delivery will be covered by IKEA, (but not under this guarantee). For claims under this last particular condition the customer should contact IKEA Customer Service at www.IKEA.xx
- Cost for carrying out the initial installation of the IKEA appliance.

These restrictions do not apply to fault-free work carried out by a qualified specialist using our original parts in order to adapt the appliance to the technical safety specifications of another EU country.

How country law applies: This guarantee gives you specific legal rights, and is in addition to your statutory legal rights.

Area of validity: For appliances which are purchased in one EU country and taken to another EU country, the services will be provided in the framework of the guarantee conditions normal in the new country. An obligation to carry out services in the framework of the guarantee exists only if the appliance complies and is installed in accordance with:

- the technical specifications of the country where the guarantee claim is made.
- the assembly and installation instructions and safety information that come with the appliance.

How to reach us for before buying if you need advice: If you have any questions about our appliances, please contact IKEA Customer Service at www.IKEA.co.uk or call 01733 520006.

How to reach us if you need service support after buying: Please ring the number given in the documentation that comes with the product. To make sure that we can give you the best assistance, please read the Instructions for Use carefully before contacting us. Please also have the IKEA article number for your appliance at hand before calling us. You'll find this 8 digit number on your receipt as well as on the rating plate of the appliance.
