DIMENSIONS

Fig. 1

Fig. 2.A

Fig. 2.B
BEFORE USE

* Keep the packaging material out of reach of children.
* Please read these instructions carefully and keep them for future reference.
* Peel off protective film before using the product for safety. Fig. 3.
* Use after removing of PVC film surface must be cleaned with cotton or cloth.
* For Any Further Queries Please Call at our Toll Free no.

PRECAUTIONS

* Ensure that the mains voltage corresponds with the recommended voltage of the chimney.
* Connect the chimney to the electric supply with proper earthing.
* When installed, the minimum gap between the Chimney and the hob must be 700mm for Gas hob & 500mm for Electric hob as Fig.4
* Never leave frying pans unattended during use, as overheated oil may catch fire.
* In the Ducting mode, the chimney duct must not be connected to an outlet that is used for exhausting fumes from other appliances like central heating flue.
* Before carrying out any maintenance, unplug the chimney from electric supply.
* Never use high naked flame under the chimney when it is in operation.
* When using a gas hob underneath the chimney, never leave the burner of the hob uncovered while the chimney is in use or when the pans have been removed. Switch-off the burner after usage, never leave the burner “ON”, when unattended / not in use.
* Always ensure that the appliance is used in accordance with the manufacturer’s instruction.

INSTALLATION

* The Chimney can be installed as Extraction Mode (Ducting) and Re-circulating Mode (Recycling). All Chimneys perform more efficiently in the Ducting Mode.
* The installation must be done by an authorised service representative, with thorough knowledge of the parameters concerning installation of chimney.
* Ensure that the installation is carried out as per enclosed general installation guidelines mentioned in the booklet.
* Use recommended size 1.50 mm for the outlet duct pipe (minimum is 1.20 mm). A duct pipe with a smaller cross-sectional area damages the unit and also invalidates the warranty. Best suited flexible ducting pipes are available with service centers at an additional cost.

Wall marking:

• Draw a vertical line on the supporting wall up to the ceiling, or as high as practical, at the centre of the area in which the hood will be installed.
• Place bracket 5 on the wall as shown about 1-2 mm from the ceiling or upper limit, aligning the centre (notch) with the vertical reference line.
• Mark the wall at the centres of the holes in the bracket.
• Place bracket 5 on the wall as shown at X mm below the first bracket (X = height of the upper chimney section supplied), aligning the centre (notch) with the vertical line.
• Mark the wall at the centres of the holes in the bracket.
• Place bracket 4 as shown 110 mm from the vertical reference line and 163 mm base of the chimney till the hood body fixing bracket.
• Mark the centres of the holes in the bracket.
• Repeat this operation on the other side.

Wall drilling and bracket fixing
**GENERAL INSTALLATION GUIDELINE.**

* Ensure the installation type of chimney i.e. Recycling or Ducting.
* Mark the standard distance between top of the hob and bottom of the chimney (500 / 700mm).
* Find and match the center of the chimney and hob as Fig.5
* Mark the holes for wall mounting bracket on the walls as per schematic diagram as Fig.5
* By making standard holes, fix the wall mounting bracket on the wall.
* Install the chimney on the wall.
* Align the chimney horizontally by adjusting the wall level screw.
* Connect the power supply cord to electrical supply point.
* In Ducting mode, after installing the chimney, make the ducting as per company recommended guidelines.
* In recycling mode, install charcoal filter as applicable to model. Charcoal filters are not available with product and can be purchased through authorized service center.
* Fix the duct cover as Fig.1

**DUCTING FOR EXHAUST SYSTEM**

**Mounting the hood body**

* Before attaching the hood body, tighten the two screws located on the hood body mounting points.
* Hook the hood body onto the screws.
* Fully tighten the support screws.
* Adjust the screws to level the hood body.

**CONNECTIONS**

**Ducted Version Air Exhaust System**

When installing the ducted version, connect the hood to the chimney using either a flexible or rigid pipe Ø 150 or 120 mm, the choice of which is left to the installer.

* To install a Ø 120 mm air exhaust connection, insert the reducer flange on the hood body outlet.
* Fix the pipe in position using sufficient pipe clamps (not supplied).

**ELECTRICAL CONNECTION**

Remove the grease filters make sure that the connector of the feeding cable is correctly inserted in the socket placed on the side of the fan. Insert the main plug in socket and check voltage with proper earthing.

**FITTING THE CHIMNEY**

* Open the two side pieces out slightly, hook them up behind the bracket 5 and bring them back together again until they are in contact.
* Warning: If it has been extended so far that the lower slots in the upper chimney are level with the holes in the bracket, use the screws to fix it; otherwise only use the bottom bracket as a stop for the upper chimney.

**Lower Chimney**

* Fix the lower part to the Hood canopy at the sides, using 2 screws.
