SAFETY

Children's safety is always our highest priority. Our products are designed and tested to comply with all applicable safety requirements in the countries where the products are sold. We also test all our children's products at our own accredited test laboratory in Sweden, as well as at independent accredited test laboratories and institutes around the world. IKEA fulfills the strictest standards for cribs around the world and specific standards & regulations to North America.

HOW ARE OUR CRIBS TESTED?

All our cribs undergo several different tests to ensure they are safe to use. First, they are inspected for any protruding parts, loose parts or fittings, and sharp edges. Then, all gaps and openings between spindles and the slats in the bed base are measured. The crib is tested with impact and pressure tests for strength, stability and durability and to ensure that the spindles will not twist or rotate from their position and create potentially hazardous openings. The bed base is also tested. For example, in a test for the European market, we subject the bed base to impact from a 10 kg weight that is dropped 1,000 times from five different positions. The same or similar tests are made on bed bases for cribs on all markets where we are active, but the tests may differ somewhat, depending on the specific requirements of the respective country.

Security for babies and parents

That your baby can sleep safely and securely is as important to us as it is to you. That's why all our cribs must withstand the toughest safety tests in the world. And even if you may have a hard time believing it right now, your baby will grow – quickly. He or she may even try to climb out of bed on their own, with the risk of falling. Then it can be reassuring to know that you can lower the bed base on all of our cribs or remove one side completely. We did everything we could so both you and your baby can sleep well.

Safety down to the smallest detail

No matter which of our cribs you choose, you can be sure of one thing - every detail is well-thought-out. The distance between the slats, the non-toxic and durable materials, the rounded shapes and bed bases with good ventilation, which gives your baby a pleasant sleeping climate. What’s more, many of the cribs belong to a series, which means that you can furnish your child’s entire room in the same style.

YOU CAN DO IT YOURSELF, BUT YOU DON’T HAVE TO.

Shopping service

We collect the products on your shopping list and deliver them to your home or office. Talk to a co-worker or pick up a delivery brochure for more details.

Delivery service

We can deliver your purchases directly to your home or office. Talk to a co-worker or pick up a home delivery brochure for more details.

Assembly service

We can assemble your purchases in your home or office. Talk to a co-worker or pick up an assembly brochure for more details.

This is a reference guide created to better assist customers when purchasing products. While a high level of accuracy has been sought in its preparation, we cannot guarantee that there are no errors or omissions nor will we be bound by them. Availability may vary by store and prices are subject to change. Please see an IKEA co-worker or visit www.IKEA.ca for more information.

1. Choose your materials. Choose between spring, latex, or foam. All are safe and hygienic. If you are unsure ask yourself, what type of mattress do you prefer to sleep on?

Spring: VYSSA spring mattresses are made with either pocket or Bonell spring construction. The construction of spring crib mattresses allows air to flow freely, promoting good air circulation and a favourable sleeping climate. Both sides may be slept on, which prolongs their use.

Latex: Only synthetic latex, which is designed for babies to sleep on, is used in VYSSA latex mattresses; it is extremely durable and promotes a healthy sleeping environment, as babies may be allergic to natural latex. Latex provides additional pressure relief for extra comfort, and both sides may be slept on, which prolongs their use.

Foam: All VYSSA foam mattresses use quality polyurethane or high resilience foam, which are well cut, durable and intended for sleeping therefore making both a safe choice for crib mattresses. High resilience foam is durable, relieves pressure points, and provides comfort and support for your growing baby. Both sides of our foam mattresses may be slept on, which prolongs their use.

2. Identify individual needs

Time: How many years do you think you will use your crib mattress? The longer you plan on keeping the same mattress will affect which mattress you should choose. If you want to use the same mattress into the toddler years a thicker and more durable mattress will provide better support for older babies and toddlers, who like to stand and bounce in their cribs.

Added benefits: All crib mattresses must be firm, and promote good air circulation for safety and hygiene. In addition to these requirements, VYSSA mattresses provide the following:

- Air circulation: All VYSSA crib mattresses promote good air circulation, thanks to materials like egg-carton foam, pocket spring construction or latex.
- Pressure relief: All VYSSA mattresses provide some pressure relief, because they are made with materials like pocket springs, high resilience foam or latex.
- Initial softness: All crib mattresses must be firm to provide a safe sleeping environment for your baby. Some covers are quilted, which adds an initial feeling of softness. This makes the mattress soft to the touch, while remaining firm.

3. Choose your mattress

On the following pages you will find all of our crib mattresses we offer, along with detailed facts for each.
